

If you can't find your window style and code, you can simply measure the visible glass size of your skylight window. Ensure you measure the glass size only to get an accurate measurement.

First measure from the top to the bottom of the glass to get your height, then measure from left to right to get your width. You should always take your measurements 3 times to ensure they are correct.

Now that you have your glass size measurements, you can find your code in our conversion tables below. We have listed the glass size for all Velux, Fakro, Dakstra, Keylite and Rooflite Windows. Please ensure you look at the correct manufacturer table when converting your sizes.

Please Note: All glass size measurements in the tables below are in centimetres.

Convert Visible Glass Size to Skylight Window Code

VELUX

Code	Glass Size (cm)
064	29.3 x 73
1	60.3 x 73
10	96.3 x 115
